

Rinnai

Energysaver® 309FT & 559FT

Experience Our Innovation

The Rinnai Energysaver® range of Power Flued heaters achieve an ideal balance of an even spread of warm clean air throughout the room, at efficiency levels which out perform most other heating systems. Thermostatically controlled for true peace of mind, the new Rinnai 309FT & 559FT Energysavers offer the ultimate in comfort and safety.

State-of-the-art efficient heating

Why heat your whole house, when you usually live in one area at a time?

- By installing more than one Energysaver heater you automatically combine high efficiency heating with zoned heating
- Energysavers are also perfect for extensions and renovations where existing heating systems can not be extended or for areas of your home that are used less frequently
- Energysavers have an energy efficiency rating between 4.2 - 4.6 Stars. These are amongst the highest available for flued space heaters, ultimately reducing your heating costs.

Superior Indoor Air Quality

- Energysavers expel the combustion products to the outside with the use of a special power flue system. The Energysaver uses external air for combustion leaving the inside room air clean and healthy.
- Often referred to as 'room-sealed' appliances, Energysavers are perfect for those who may be susceptible to allergies or respiratory problems, as the indoor air quality is not compromised
- All Energysaver models also have an inbuilt humidifier tray located at the base of the unit. By adding water, the humidity in the room will rise as the heated air passes directly over the tray. The increased humidity feels warmer and more comfortable on your skin, unlike some other heating sources that tend to dry out the air.

Standard features

Dual inbuilt programmable timers - set the timer for the mornings just before you get out of bed and also for the afternoon when you get home

Programmable Delay function - Ability to select required number of operating hours before the Energysaver automatically turns off

A Pre-heat function is also incorporated with the timers. The unit will automatically begin sensing the room temperature 1 hour prior to the set programmed time. It will automatically begin pre-heating the room early to ensure that your desired temperature is reached by your programmed time.

Economy Mode function designed to gradually reduce the heat settings once the room has maintained the set temperature for a period of 1 hour. Many people operate heaters at a higher temperature initially when they are cold, but forget to turn them down later.

The Rinnai Energysaver can automatically do this for you – you won't notice the change in temperature, but you will notice the reduction in your gas bill!

Low standby power consumption – a new feature where the control panel powers down when not in use, further reducing your energy costs

Energysaver 559FT – ideal for locating under windows

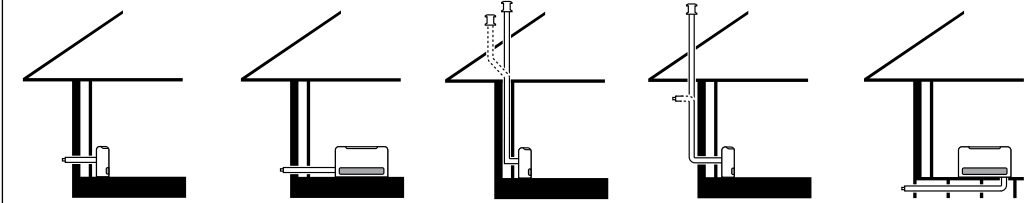

Energysaver 309FT – perfect for locating in tight spaces

Safety is Paramount

- The main safety feature of the Energysaver range is the 'cool-to-touch' outer casing. This is particularly good if you have small children in the home
- In addition, all models include either a Child Lock or a lockable control panel, ensuring that little fingers can't change your settings or accidentally turn the unit on
- The new 309FT and 559FT also have the ability to pre-set the maximum temperature – another great feature to stop children upsetting your comfort level
